

YELISSON ORTIZ

Senior Frontend Engineer — TypeScript · React · AI-Assisted Development

Santiago, Dominican Republic (GMT-4) · Open to remote · ortizyelison@gmail.com · +1 (809) 601-4280 · linkedin.com/in/yelisson-ortiz

SUMMARY

Senior Frontend Engineer with 6+ years shipping production web applications for SaaS and enterprise clients. Strong foundations in **TypeScript, JavaScript (ES6+), HTML5 and CSS3/SASS**, with full-stack range across **Node.js, Java/Spring Boot, Python/Django and SQL**. Proven at ramping onto unfamiliar codebases and stacks quickly in fast-paced Agile teams. Uses **AI development tools daily** (Claude Code, MCP integrations, AI-assisted code review and test generation) to ship faster without trading off quality.

SKILLS

Languages & Core: TypeScript, JavaScript (ES6+), HTML5, CSS3, SASS, responsive design, cross-browser compatibility

Frontend: React 19, Next.js (SSR), Redux, TanStack Query, Zustand, Tailwind CSS, Material UI, Storybook, i18n

Backend & Data: Node.js, REST APIs, Spring Boot (Java), Python/Django, MySQL (SQL), Flyway migrations

AI-Assisted Development: Claude Code, MCP integrations (Figma), AI-augmented code review and test generation

Testing & DevOps: Playwright (E2E), Vitest, React Testing Library, MSW, GitHub Actions, Docker, Git, Agile/Scrum

EXPERIENCE

Frontend Developer — SkoolScout (*EdTech SaaS*)

Oct 2024 – Present · Remote

- Built an **AI-assisted design-token pipeline** that pulls Figma variables (color, spacing, typography) via MCP into the TypeScript component layer, eliminating design-code drift and keeping production 1:1 with the design source of truth.
- Architected a **shared, typed mock layer** (TanStack Query v5 + MSW) that drives Storybook, Vitest and Playwright from the same fixtures, so the full E2E suite runs on every pull request and catches UI regressions before production.
- Created reusable **GitHub Actions workflows** (build, functional tests, security scanning) plus Storybook 10 visual baselines and usage docs, making every component self-documenting and team standards enforceable.
- Delivered features end-to-end by contributing to the **Spring Boot (Java) API** (controller → service → DAO, Flyway migrations, JaCoCo coverage), removing dependency on backend availability.

Frontend Developer — Intellisys D. Corp. (*Okus, customer-education platform*)

Feb 2023 – Jun 2024 · Santiago, DR

- Refactored a legacy component hierarchy and data flow into a clear separation of concerns, improving scalability and performance as user load grew.
- Built a reusable **React + Redux component library** adopted across the app, standardizing interactions and removing duplicated page-level logic.
- Designed and shipped authenticated **Node.js REST endpoints** backed by MySQL.

Full-Stack Developer — State Search (*data-aggregation web app*)

Jan 2022 – Feb 2023 · Santiago, DR

- Built the React UI and optimized pagination, caching and query shaping in the **Django** backend to keep navigation and filtering fast over a continuously growing dataset.
- Built a Python + Selenium scraping and normalization pipeline that consolidated multiple public data portals into one searchable dataset.

Full-Stack Developer — Intellisys D. Corp. (*MyLegalTeck, legal-services platform*)

May 2020 – Oct 2021 · Santiago, DR

- Cut codebase duplication by ~40%** and accelerated feature delivery by reorganizing the component architecture around reusable SASS-styled primitives (React, Redux, Material UI).
- Integrated checkout, webhook validation and reconciliation end-to-end across **multiple payment providers**, keeping revenue collection reliable.
- Implemented route-level **internationalization (i18n)** without forking the app, opening the product to new markets.

Full-Stack Developer — Intranet (*automated payroll system*)

Jan 2019 – Apr 2020 · Santiago, DR

- Automated the accounting team's manual payroll process with a generator integrated with the **Zoho API** (React UI, Docker deployment).

EDUCATION

Computer Software Engineering (Technical Program) — Cincinnatus Institute of Craftsmanship, 2018–2019
